EXPERIENCE

Lead Engineer (Founder)

AI Editor LLC

-  2025 – Present
-  Remote
- Building full stack P2P VPN application: native Android client (Kotlin) and Go backend, architected networking layer for cross-device communication
 - Architected and shipped AI Photo Editor (Swift / SwiftUI) iOS app end-to-end as sole engineer, from concept through App Store publication in under three months; 500+ users with zero crash rate
 - Integrated DeepAI API and third-party SDKs, on-device image processing, and NLP capabilities into core editing workflows
 - Designed offline-first architecture with caching; resolved complex performance bottlenecks using Xcode Instruments (cold-start under 6s, peak memory $\leq$ 500MB)
 - Owned full iOS lifecycle: architecture, unit and UI testing, CI/CD, App Store Connect releases

Full Stack Engineer

AssetMark

-  2025
-  Concord, CA
- Delivered end-to-end full-stack features across React (TypeScript), .NET Core (C#), and PostgreSQL on a financial services platform serving 10,000+ users
 - Architected and deployed legacy integration solution using iframe and window.postMessage to create a single-page app enabling both legacy server-side ASP.NET applications and new .NET Core / React applications to interact with a persistent navigation bar
 - Designed backends for Linux production deployment; ran PostgreSQL locally in WSL Ubuntu during development
 - Designed scalable RBAC permission schema; built REST APIs with strong validation and integration across services; achieved 85% unit test coverage
 - Code reviews, design discussions, and Agile / Scrum collaboration with cross-functional product, frontend, and backend teams

Software Engineer

Practice Defenders

-  2025
-  Remote
- Built Python API integrations and automation pipelines across external systems in the electronic health records (EHR) domain; focused on reliability, validation, and consistent data handling

Software Developer (Volunteer)

AESOP Afghanistan

-  2023 – 2024
-  Remote
- Developed Python backend services and API-driven workflows leveraging Google APIs; refactored legacy systems and introduced automated testing practices using Python's unittest framework

SUMMARY

Full-stack engineer with end-to-end production experience across React / TypeScript frontends, .NET Core and Python backends, and PostgreSQL. Recently delivered features serving 10,000+ users at AssetMark, including an iframe + window.postMessage SPA bridge between legacy ASP.NET and modern .NET Core / React applications, and shipped a production iOS application as sole engineer. Currently building a Go backend, and Kotlin frontend client for Android P2P VPN application. Strong on architecture, REST API design, and shipping clean, tested code.

Mathematics & Special Education Teacher
Palm Harbor University HS; Valor College Preparatory HS
📅 2019 – 2024 📍 Palm Harbor, FL; Nashville, TN

- Strong communicator across diverse stakeholder groups; experienced explaining complex technical concepts clearly to non-technical audiences

Mathematics Tutor (Founder)
Prime Factor Tutoring Services
📅 2012 – 2020 📍 Palm Harbor, FL

- Built and ran independent client business for 8 years delivering personalized lessons; rigorous problem diagnosis and customer-focused delivery

EDUCATION

M.S. Mathematics (GPA 4.0)
Northern Arizona University
📅 Expected May 2026 📍 Flagstaff, AZ

- Coursework: Deep Learning, Numerical Analysis, Optimization, Mathematical Computing
- Led team of 5 to design an LLM evaluation system; improved measured accuracy from 50% to 96%
- Graduate Teaching Assistantship (2024 – 2026)

B.S. Mathematics (GPA 3.8)
Northern Arizona University
📅 2011 📍 Flagstaff, AZ
