EXPERIENCE

Lead iOS Engineer (Founder)

AI Editor LLC

📅 2025 – Present 📍 Remote

- Architected and shipped a production iOS application (Swift / SwiftUI) end-to-end as sole engineer, from concept through App Store publication in under three months
- 500+ users with zero crash rate across all production versions; cold-start latency under 6 seconds, peak memory ≤500MB
- Designed offline-first architecture with caching for resilient mobile UX
- Integrated REST APIs, third-party SDKs, and on-device intelligence into core workflows
- Implemented MVVM and modular architecture with reusable components
- Resolved complex performance bottlenecks and crashes using Xcode Instruments (Time Profiler, Allocations, Leaks)
- Owned full mobile lifecycle: architecture, unit and UI testing, CI/CD, App Store Connect releases
- Built native Android (Kotlin) networking application in parallel; architected P2P networking layer and cross-device communication system

Full Stack Engineer

AssetMark

📅 2025 📍 Concord, CA

- Delivered end-to-end full-stack features across React (TypeScript), .NET Core (C#), and PostgreSQL on a financial services platform serving 10,000+ users
- Architected legacy integration solution using iframe and window.postMessage to create a single-page app enabling both legacy server-side ASP.NET applications and new .NET Core / React applications to interact with a persistent navigation bar
- Designed scalable RBAC permission schema; built REST APIs with strong validation and integration across services; 85% unit test coverage
- Designed backends for Linux production deployment; ran PostgreSQL locally in WSL Ubuntu during development
- Code reviews, design discussions, and Agile / Scrum collaboration with cross-functional product, frontend, and backend teams

Software Engineer

Practice Defenders

📅 2025 📍 Remote

- Built Python API integrations and automation pipelines across external systems in the electronic health records (EHR) domain; focused on reliability, validation, and consistent data handling

SUMMARY

iOS engineer who has shipped a production Swift / SwiftUI application end-to-end — from architecture through App Store release — as sole engineer in under three months, supporting 500+ users with zero crash rate. Strong on UIKit and SwiftUI, REST API integration, offline-first architecture, Xcode Instruments-driven performance work, and MVVM. Comfortable owning the full mobile lifecycle including CI/CD and App Store Connect releases. Full-stack and AI/LLM background rounds out the iOS work for product teams that value breadth.

IOS & APPLE

Swift SwiftUI UIKit Xcode
iOS SDK Core Data
Core Animation App Store Connect
Apple HIG

ARCHITECTURE

MVVM MVC Clean Architecture
Modular Design SOLID
Offline-First Caching

APIS & INTEGRATION

REST APIs JSON URLSession
OpenAPI Third-Party SDKs

CONCURRENCY & PERFORMANCE

Async/Await Swift Concurrency
GCD Memory Management
Xcode Instruments

TESTING & DEVOPS

Unit Testing Integration Testing
UI Testing Git Jira CI/CD
GitHub Actions
App Store Deployment

MOBILE & LANGUAGES

Swift Kotlin Xcode
Android Studio Python
TypeScript C# SQL Julia
C++

Software Developer (Volunteer)

AESOP Afghanistan

📅 2023 – 2024 📍 Remote

- Developed Python backend services and API-driven workflows leveraging Google APIs; refactored legacy systems and introduced automated testing practices using Python’s unittest framework

Mathematics & Special Education Teacher

Palm Harbor University HS; Valor College Preparatory HS

📅 2019 – 2024 📍 Palm Harbor, FL; Nashville, TN

- Strong communicator across diverse stakeholder groups; experienced explaining complex technical concepts clearly to non-technical audiences

Mathematics Tutor (Founder)

Prime Factor Tutoring Services

📅 2012 – 2020 📍 Palm Harbor, FL

- Built and ran independent client business for 8 years delivering personalized lessons; rigorous problem diagnosis and customer-focused delivery

EDUCATION

M.S. Mathematics (GPA 4.0)

Northern Arizona University

📅 Expected May 2026 📍 Flagstaff, AZ

- Coursework: Deep Learning, Numerical Analysis, Optimization, Mathematical Computing
- Led team of 5 to design an LLM evaluation system; improved measured accuracy from 50% to 96%
- Graduate Teaching Assistantship (2024 – 2026)

B.S. Mathematics (GPA 3.8)

Northern Arizona University

📅 2011 📍 Flagstaff, AZ

AI & LLMS

- LLM Integration
- Claude APIs
- Prompt Engineering
- NLP
- On-Device ML

WORKFLOW

- Agile / Scrum
- Code Review
- Mentorship
- Cross-Functional Collaboration
